Fujifilm presenta un nuovo adattatore per ottiche Leica M su corpo macchina X-Pro1

Non è l'unico sul mercato ma è il prodotto ufficiale **Fujifilm** destinato a montare obiettivi **Leica M** sul corpo macchina ad ottiche intercambiabili **X-Pro1**.

La realizzazione è mista, alluminio ed acciaio, ed il Produttore ha previsto nell'aggiornamento al **firmware** della **X-Pro1**, dall'**1.10** in poi, l'accesso alle impostazioni avanzate relative all'adattatore che consentono di scegliere dei lens pre-set per la correzione automatica via software di distorsioni ed aberrazioni.

I tre obiettivi **Leica M** supportati sono il **21**, il **24** ed il **35mm**.

Il prezzo del nuovo adattatore **M-Mount** è di circa 200USD e la disponibilità è prevista per il mese di Giugno.

Press Release

FUJIFILM ANNOUNCES M-MOUNT ADAPTER FOR X-PRO1 INTERCHANGEABLE LENS DIGITAL CAMERA SYSTEM

Valhalla, N.Y., May 24, 2012 - FUJIFILM North America Corporation today announced that it will release an M-Mount Adapter for the FUJIFILM X-Pro1 interchangeable lens digital camera system, specially made to enhance the experience of taking photos with the professional X-Pro1 digital camera. The all new M-Mount Adapter is designed to expand the lens selection of the FUJIFILM X-Pro1 interchangeable lens digital camera system, and give photographers a wide range of shooting capabilities.

"Since the introduction of the FUJIFILM X100, Fujifilm has made a commitment to expanding the functionality of the X-Series, and today we are very pleased to offer customers a premium accessory that they can truly be excited about - an M-Mount Adapter for the FUJIFILM X-Pro1," said Go Miyazaki, division

president, Imaging and Electronic Imaging Divisions, FUJIFILM North America Corporation. "We listened very carefully to our customers about their desire for an M-Mount for the FUJIFILM X-Pro1, and we are proud to announce that this accessory will be available soon for everyone."

Precision Made M-Mount Adapter

Similar to the FUJIFILM X-Pro1's exacting design standards, the precision made M-Mount Adapter is engineered to deliver superb results for discerning photographers.

The M-Mount Adapter is comprised of three parts: an aluminum mount for the body, a stainless steel mount for the lens, and an aluminum central tube. This construction enables an accurately-maintained distance of 27.8mm from the lens mount to sensor, which is crucial for delivering high quality and high resolution images.

The camera side of the M-Mount Adapter features an array of electronic connections that automatically pass information to the FUJIFILM X-Pro1 body based on pre-registered lens profiles. With firmware version 1.10 or later, this information is transmitted by pressing the Function button on the side of the adapter, which allows users to access the M-Mount Adapter Settings menu on the rear LCD.

While attached, the M-Mount Adapter still allows users to enjoy the benefits of the FUJIFILM X-Pro1's extraordinary Hybrid Multi Viewfinder. The Electronic Viewfinder (EVF) and LCD monitor both offer a 100% field of view, and the Optical Viewfinder (OVF) displays a bright frame corresponding to the focal length in use.

With the Fujifilm M-Mount Adapter attached, profiles can be user-defined, based on distortion, peripheral illumination and color shading corrections.

Three levels of distortion correction are also available to combat barrel distortion on wide-angle lenses, and pincushion distortion on telephoto lenses. Users can select from Strong, Medium or Weak correction, or simply turn any correction off.

FUJIFILM M-Mount Adapter key features

- ? 27.8mm lens mount to sensor distance
- ? Compatible with Hybrid Multi Viewfinder 1.10 or later must be installed for using above features)

The M-Mount Adapter will be available in June 2012 for \$199.99.
