Panasonic GH3, nuovo firmware 1.1

Panasonic

Rilasciato l'aggiornamento firmware della flagship m4/3: niente focus peaking

Immediatamente disponibile per il download il **firmware v.1.1** relativo al corpo macchina mirrorless **Panasonic GH3**.

Tra le **novità** , una facilitata **connessione WiFi**, la presenza della modalità FullHD **1080/60p** a 28Mbps in f.to MP4 ed un miglior AF tracking con gli obiettivi **Lumix G X VARIO 14-42mm F/3.5-5.6** e **Lumix G X Vario PZ 45-175mm F4.0-5.6 ASPH OIS**.

Chi si aspettava di poter sfruttare l'innegabile utilità della funzione per il **peaking**, resterà deluso poiché essa non è presente (mai dar troppo retta ai *rumors*...).

Di seguito la **lista delle migliorie** mentre, al link in calce, la **pagina download**:

1. *Connecting to PC via Wi-Fi by inputting the computer name (the NetBIOS name for Apple Mac computers) is enabled.*
2. *1920 x 1080, 60p[NTSC]/50p[PAL], 28Mbps mode is added in the video recording option of [MP4].*
3. *Speed of AF, consecutive shooting performance of AFC is enhanced in use with H-PS14042 and H-PS45175.*

*Please update the firmware of the lens to its latest version.

4. *The monitor continues to display images during HDMI output even while [Auto LVF/Monitor OFF] is set.*
5. *Instability of shutter interval during interval shooting is improved.*
6. *When [Shutter AF] is OFF, operation is changed not to enlarge the image while using [Pinpoint AF] when even if shutter button is half-pressed.*
7. *Performance of image signal processing is enhanced during video file playback.*
