

DFI presenta la sua soluzione Intel X48

LINK (<https://www.nexthardware.com/news/schede-madri/537/dfi-presenta-la-sua-soluzione-intel-x48.htm>)

Una scheda madre destinata al segmento enthusiast.

Ricordiamo che Intel ha rinviato la presentazione di X48 a Marzo inoltrato. Tuttavia i vari produttori si apprestano comunque a presentare le loro soluzioni basate sul chipset di punta di Intel.

Ed ecco il testo della press release:

Although the Chinese New Year festival was important to DFI's headquarters, the R&D team of DFI hasn't slowed down at all, in order to launch the new product of X48 motherboard well ahead of the preset schedule. DFI's LANParty LT X48-T3R is now just around the corner, ready to greet our enthusiasts throughout the world. This motherboard, based on Intel LGA775 socket CPU, will fully support the latest Intel 45nm process Quad-core CPU. Our LANParty LT X48-T3R features the highest end of Intel X48 + ICH10R chipset. It provides enthusiasts with a powerful strength that supports the latest CrossFire technology and the fastest FSB1600MHz, DDR3 1333 memory.

Specification:

Chipset: Intel X48+ICH10R

Memory: Supports DDR3 Memory

Audio: DFI Bernstein Audio module

RAID: Supports RAID 0/ 1/ 0+1/ 5

X48 + ICH10R:**DDR3 memory:****PCIE Gen 2 Technology:****The CrossFireX:****Functionality of Teaming:****Serial ATA 3.0GBps/ (SATA II):****The Digital PWM:****Bernstein audio:****EZ Switch:****The debug light:****100% Japanese Capacitors:****CMOS Reloaded Technology:****Genie BIOS:**

Enthusiasts always take great pleasure when they are able to squeeze a little more performance from their system through overclocking. For this reason, DFI offers a variety of BIOS options for enthusiasts. The voltage options include memory voltage option, NB & SB option, CPU VCore option and HT voltage option. This creates an unlimited OC environment for our enthusiasts.
